

W6-P1: Update a task in Supabase

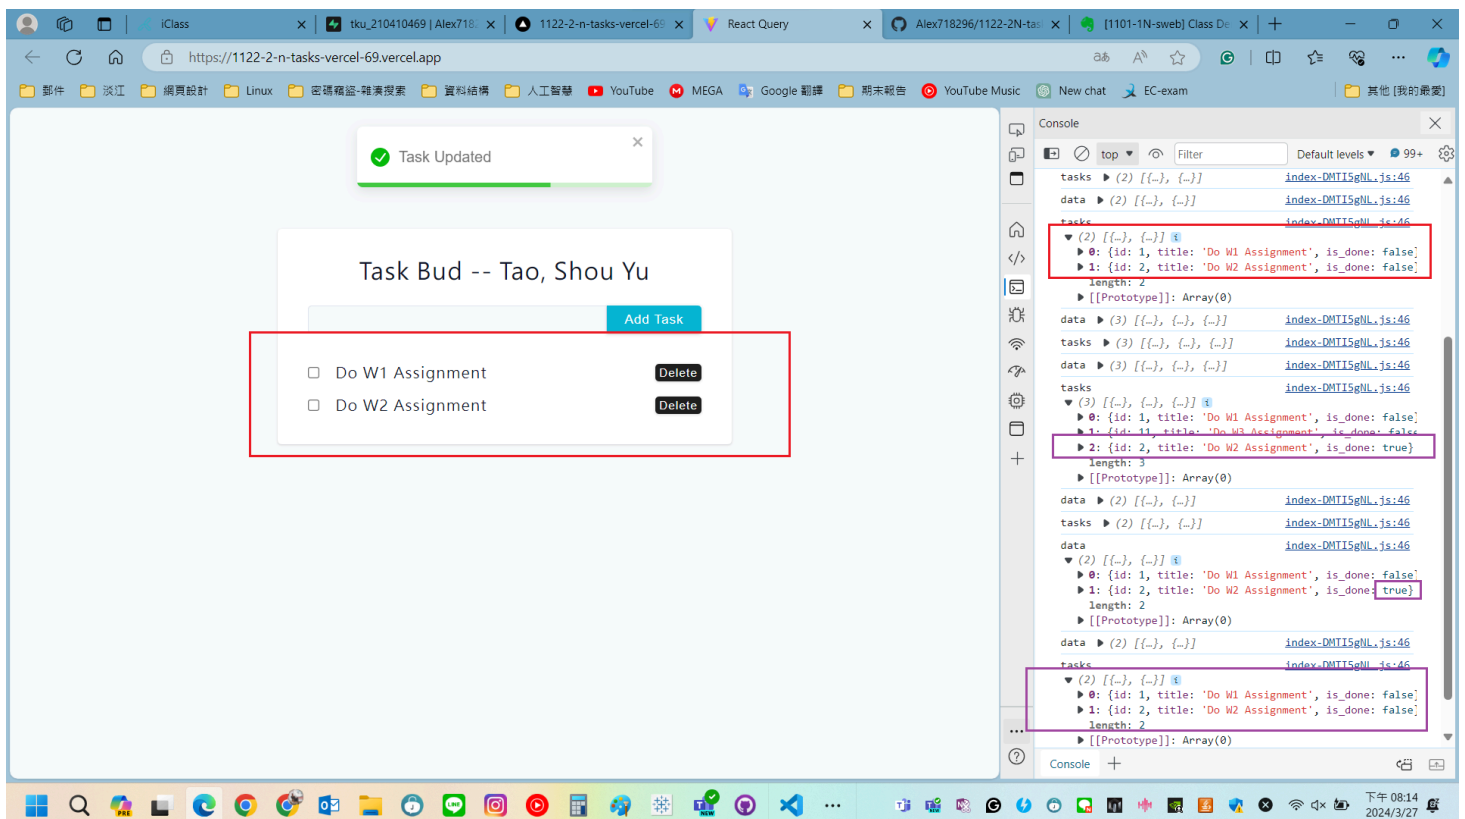

937854b htchung Wed Mar 27 19:16:13 2024 +0800 W6-P1: Update a task in Supabase

W6-P2: Delete a task in Supabase

=> local

=> Vercel: insert a task, edit the task, delete the task

W6-P3: Get all tasks from node server

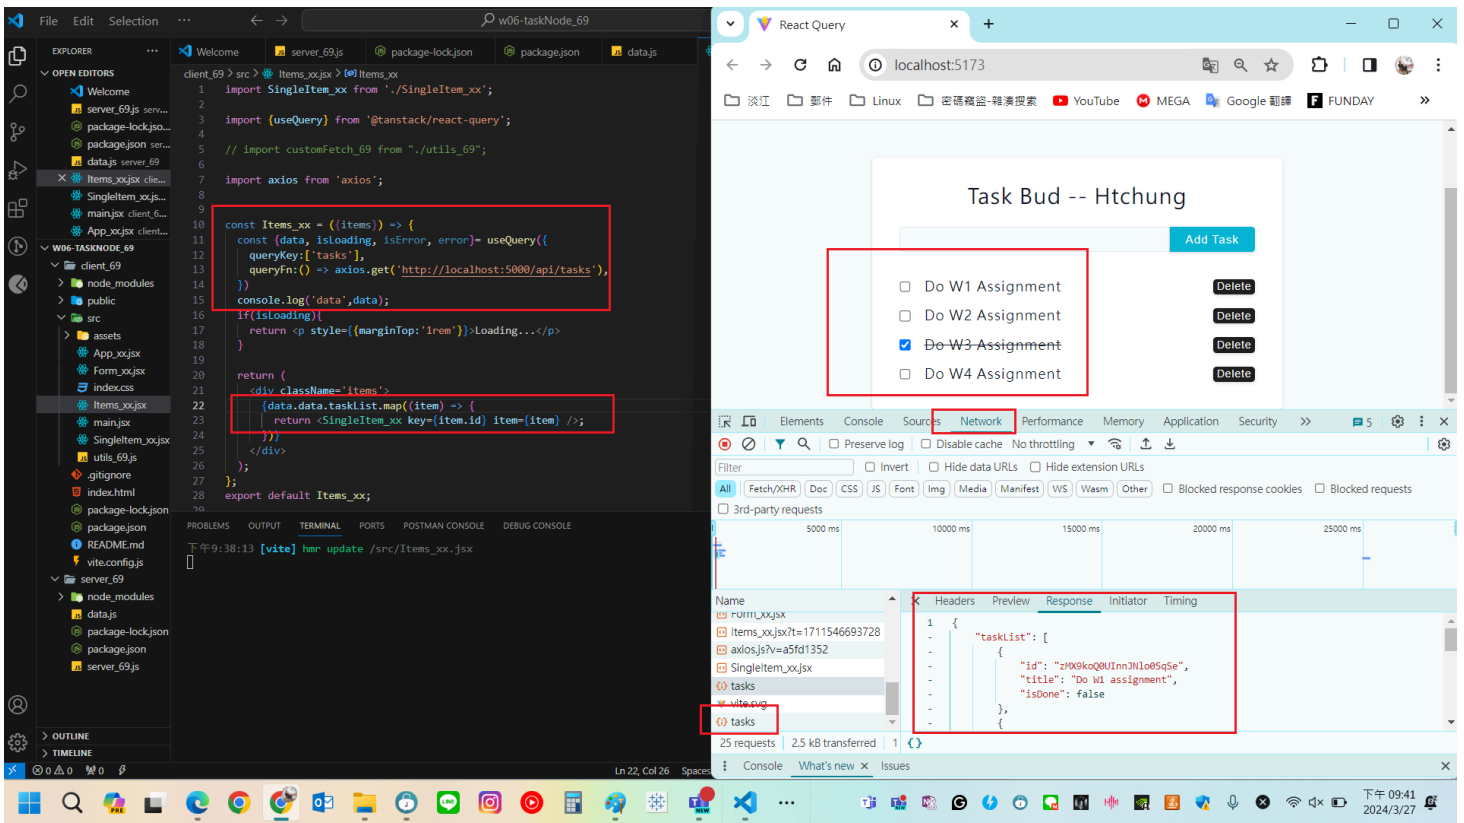

The screenshot displays a development environment with a code editor on the left and a web browser on the right. The code editor shows the `Items_xx` component in `Items_xx.jsx`, which uses `useQuery` to fetch tasks from a server. The browser shows the rendered application, "Task Bud -- Htchung", with a list of tasks and an "Add Task" button. The console on the right shows the JSON response from the server, which is an array of four tasks.

```
const Items_xx = ({items}) => {  
  const result = useQuery({  
    queryKey: ['tasks'],  
    queryFn: () => axios.get('http://localhost:5000/api/tasks'),  
  })  
  console.log('result', result);  
  return (  
    <div className="items">  
      {items.map(item => (  
        <SingleItem_xx key={item.id} item={item} />  
      ))}  
    </div>  
  );  
};  
export default Items_xx;
```

Task Bud -- Htchung

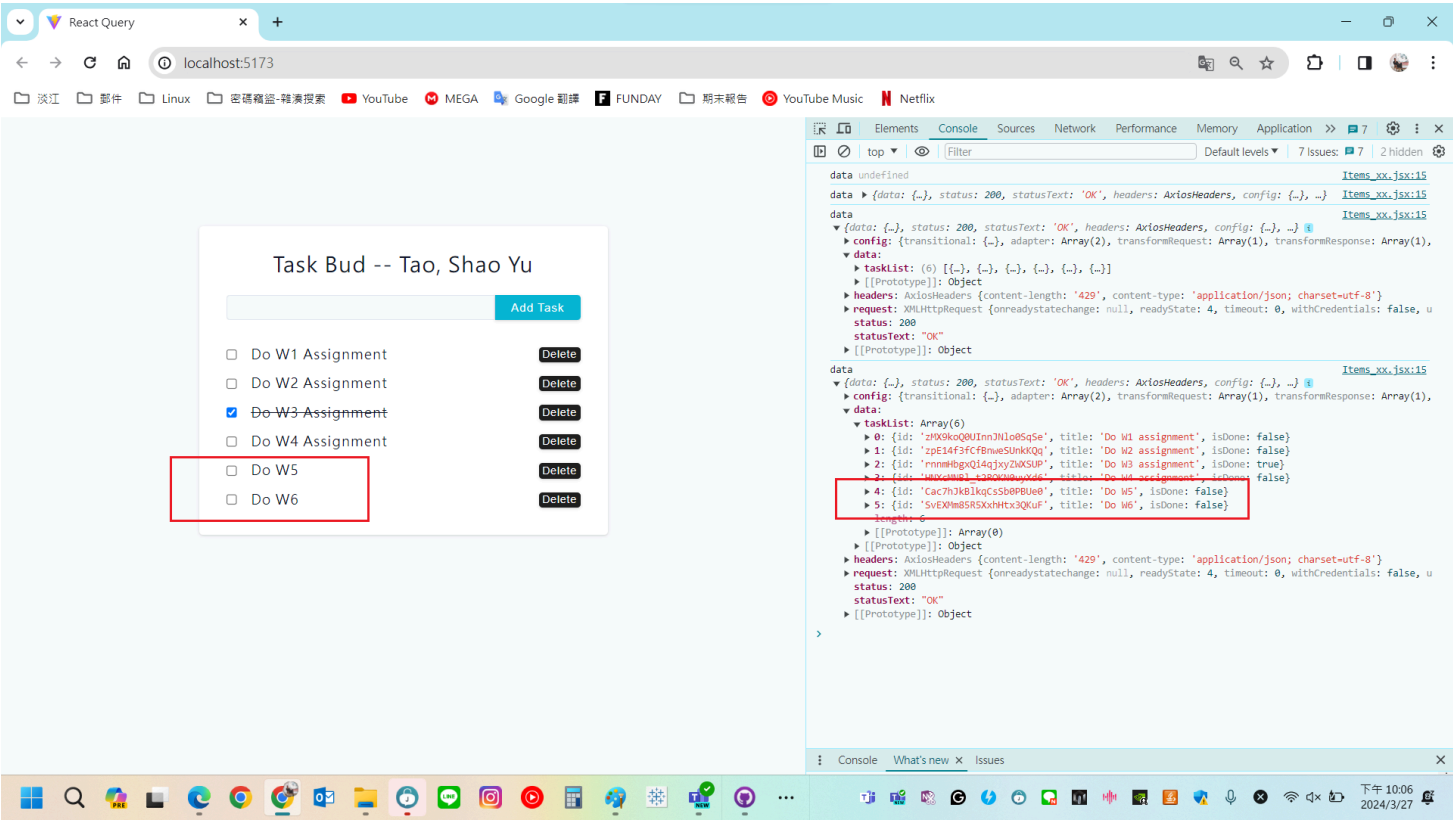

- ☐ Walk The Dog Delete
- ☐ Wash Dishes Delete
- ☒ Drink Coffee Delete
- ☐ Take A Nap Delete
